

WOLF PORTRAIT™ SIDING

HIGH-DENSITY CELLULAR™ TECHNOLOGY

CARE AND MAINTENANCE

Wolf Portrait™ Siding, while very durable, must be maintained. The following recommendations will help keep the product looking its best. For all cleaners, please test on a small sample or an inconspicuous area prior to using to ensure compatibility.

- Wash product periodically, using normal household products, to remove dirt and debris.
- For rust removal, a household toilet bowl cleaner is recommended.
- Some chemicals in sun-block, insect repellent and similar products can alter the surface of Wolf Portrait Siding. Check product labels and consult the manufacturer for compatibility with plastics before use.
- Exercise caution when using PVC glue or similar products as they may discolor and permanently damage the siding surface.
- It is important to keep all barbecue grills or other outdoor cooking appliances a safe distance away from the home to avoid heat damage.

NOTE

All siding surfaces absorb and retain heat from the sun. Greater heat retention may occur with darker colors, especially in areas of full exposure to the sun. This condition is due to the nature of the material in relation to environmental exposure, and is not covered by any express or implied warranty.

WARNING

Excessive heat build up from reflecting sunlight, especially reflected by low-emissivity (Low-E) glass, can potentially damage Wolf Portrait Siding and other building materials, since these surface temperatures may far exceed exposure to normal sunlight. Possible damage by such concentrated heat may include warping, sagging, surface discoloration, unusual weathering and increased expansion or contraction.
